

금융투자론-1

2025-1

Returns and Risk

What is an Investment?

- Current commitment of money or other resources in the expectation of reaping future benefit

Certain

Uncertain

- (Ex)
 - Investing in children's education
 - Building a manufacturing facility
 - Saving money at 2% interest rate, 1-year time deposit account
 - Buying stocks or bonds

Real Assets vs. Financial Assets

Real Assets

- Determine the productive capacity and net income of the economy
- Examples: land, buildings, machines, knowledge used to produce

Financial Assets

- Claims(청구권) on real assets, do not contribute *directly* to the productive capacity of the economy.
- Examples: stocks, bonds

Real Assets

- Real (Physical) Assets:
 - ▣ Assets that are used to produce goods and services
 - ▣ Tangible assets: land, buildings and machines
 - ▣ Intangible assets: technology, human knowledge, brand name

- Traits of Real (Physical) Assets:
 - ▣ Illiquid (비유동적, 거래비용 ↑)
 - ▣ Depreciates in value over time (가치가상감)
 - ▣ Indivisible (분할할 수 없음)

Financial Assets

- Financial Assets:
 - ▣ Assets that are claims on real assets
 - ▣ Allocation of income or wealth generated by real assets among investors is possible.
 - ▣ Fixed-income securities (bond), Equities (stock), Derivative securities (future, option, swap, etc.)

- Traits of Financial Assets:
 - ▣ Liquid
 - ▣ Does not depreciate over time
 - ▣ Partly divisible

We focus on Financial Assets !!!

- Bond (fixed income security)
 - Promise either a fixed stream of income or a stream of income determined by a specified formula
- Stock (equity)
 - Represent an ownership share in the corporation
- Derivatives (파생상품; 레버리지 및 헤지 목적으로 사용)
 - Provide payoffs that are determined by the price of underlying asset (stock, bond, currency, commodity, etc.)

The Investment Process

- Organize your portfolio
 - Collection of investment assets
- Asset allocation
 - Choice among broad asset classes
- Security selection
 - Choice of securities *within* each asset class

The Investment Process

- “Top-down” approach
 - **Asset allocation** followed by *security analysis* to evaluate which particular securities to be included in the portfolio
- “Bottom-up” approach
 - Investment based solely on the **price-attractiveness**, which may result in unintended heavy weight of a portfolio in only one or another sector of the economy

Top-down approach

9

- **탑다운 투자 방식**은 거시 경제적 요소와 산업 동향을 우선적으로 고려하는 접근법으로서, 국가 경제, 금리, 환율, 정책 변화 등의 거시 경제 지표를 분석한 후, 유망한 산업을 선택하고, 그 산업 내에서 최적의 기업을 찾아 투자하는 방식
- **예: 경기순환 주기에 따른 투자, 장기투자, 가치투자 방식**

< 방법 >

- **거시 경제 지표 분석**: 주요 경제 지표를 주기적으로 모니터링하고, 이를 기반으로 경제 전망을 설정합니다.
- **정책 변화 파악**: 특정 산업에 큰 영향을 미치는 경제 정책이나 규제 변화를 주의 깊게 살펴봅니다.
- **산업 분석**: 거시 경제 전망에 따라 성장 가능성이 높은 산업을 선정하고, 해당 산업의 시장 규모, 경쟁 구도, 기술 트렌드 등을 분석합니다.
- **기업 선정**: 산업 내에서 재무 상태, 시장 점유율, 경영진의 역량 등을 고려하여 유망한 기업을 선정합니다.

Bottom-up approach

10

- **바텀업 투자 방식**은 개별 기업의 분석을 중점적으로 하는 접근법으로서, 기업의 재무 상태, 경영진, 제품 경쟁력 등을 면밀히 분석하여 투자 결정을 내리는 방식
- 예: 스타트업 투자

< 방법 >

- **재무 분석**: 기업의 재무제표를 분석하여 수익성, 안정성, 성장성을 평가합니다.
- **경영진 평가**: 기업의 경영진의 역량과 경영 철학을 평가합니다.
- **시장 위치 분석**: 기업이 속한 시장 내 위치와 경쟁력을 분석합니다.
- **제품 및 서비스 평가**: 기업의 주요 제품이나 서비스의 경쟁력과 시장 점유율을 평가합니다.
- **가치 평가**: 주가가 기업의 내재 가치에 비해 저평가되어 있는지 분석합니다.

Markets Are Competitive

- Risk-Return Trade-off
 - **Higher-risk (bad)** assets are priced to offer **higher expected returns (good)** than lower-risk assets.
- Efficient Markets (하지만 현실에선 arbitrage가 존재)
 - Since **prices quickly adjust to all relevant information**, there should be neither underpriced nor overpriced.

PORTFOLIO MANAGEMENT

- **Passive Management**

- Holding a highly diversified portfolio
- No attempt to find undervalued securities
- No attempt to time the market

- **Active Management**

- Finding mispriced securities
- Timing the market

The Players

- Demanders of capital – Firms
- Suppliers of capital – Households
- Governments – Can be either borrowers or lenders
- Financial Intermediaries: Pool and invest funds
 - Investment Companies
 - Banks
 - Insurance companies
 - Credit unions

Financial Crisis of 2008

Antecedents of the Crisis:

“The Great Moderation (1985-2007)”

A time in which the U.S. had a long stable economy with low interest rates and a tame business cycle with only mild recessions

- **Historic boom in housing market**

Note: <https://www.federalreservehistory.org/essays/great-moderation>
Stock, James; Mark Watson (2002). ["Has the business cycle changed and why?"](#) NBER
Macroeconomics Annual. 17: 159–218

On the brink of crisis

- 2000-2006: Sharp increase in housing prices caused many investors to believe that continually rising home prices would bail out bad loans
 - 2004: Interest rates began rising
 - 2006: Home prices peaked
- 2007: Housing loan defaults and losses on mortgage-backed securities surged

At the time of crisis

- 2008: Troubled firms include Bear Stearns, Fannie Mae, Freddie Mac, Merrill Lynch, Lehman Brothers, and AIG
 - Money market breaks down
 - Credit markets freeze up
 - Federal bailout to stabilize financial system
